PROFESSIONAL SUMMARY

Computer Science student with a strong foundation in Python, Django, React, and full-stack web development. Experienced in designing RESTful APIs, implementing authentication systems, database management, and building scalable web applications. Passionate about backend development, software engineering, and problem-solving with Data Structures and Algorithms. Seeking internship or entry-level software developer opportunities to contribute to innovative projects while expanding my technical expertise.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science Engineering

Adichunchanagiri Institute of Technology | Karnataka, India

2023 – 2027

2023-2027

TECHNICAL SKILLS

Programming: Python, Java, C, SQL

Backend: Django, Django REST Framework (DRF), REST APIs, JWT Authentication

Frontend: React.js, JavaScript, HTML5, CSS3, Tailwind CSS

Core Concepts: Object-Oriented Programming, Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks

ML/AI: Pandas, Numpy, Scikit-learn, XGBoost, LightGBM, basic LLM integration (Ollama), data preprocessing,

Databases: PostgreSQL, SQLite, ChromaDB(Vector DB)

Tools & Technologies: Git, GitHub, Postman, VS Code, Render, Linux, Cloudinary

PROJECTS

1. Full-Stack E-Commerce Platform (Django | React | PostgreSQL)

Developed a complete e-commerce web application with secure user authentication, product management, shopping cart, and checkout functionality.

- Built RESTful APIs using Django REST Framework for products, authentication, and order management.
- Implemented JWT-based authentication with role-based access control.
- Designed responsive user interfaces using React.js and Tailwind CSS.
- Integrated PostgreSQL for efficient data storage and management.

2. Restaurant Digital Menu Management System (Django | DRF | PostgreSQL)

Built a web application that enables restaurants to manage digital menus and QR-code-based ordering.

- Developed REST APIs for menu, restaurant, and food item management.
- Implemented image upload and category-based food organization.
- Designed an admin dashboard for efficient menu updates.
- Used PostgreSQL for reliable and scalable data management.

3. Blockchain-Based Pension Management System (Django | Ethereum | Solidity)

Designed a transparent pension distribution platform leveraging blockchain technology for secure and tamper-proof record management.

- Developed smart contracts using Solidity for pension approval and fund tracking.
- Integrated Ethereum blockchain with a Django backend using Web3.py.
- Implemented OTP-based user verification and secure authentication.
- Improved transparency and reduced manual verification through decentralized record storage.

ACHIEVEMENTS

- Solved 400+ Data Structures and Algorithms problems on coding platforms.
- Strong understanding of backend development, API design, and database optimization.
- Active GitHub contributor with multiple full-stack and backend development projects.
